

## Project Manager

(File Reference: PM-2013)

---

On behalf of our Client, a global company providing Fuel fabrication, distribution and infrastructure services to the Energy Sector, we are conducting a search for a **Project Manager**. Project Managers partner with Sales & Marketing groups within the company to directly liaise with Customers to define their requirements and to ensure internal production, engineering and procurement groups meet those expectations. Project Managers are responsible for Contract Management and Risk Management, ensuring Customer interactions are managed through Estimating, Proposal and Implementation phases of the Contract.

Experience with large scale capital projects or production in the \$5 Million - \$20 Million per project or production unit segment is ideal. Project Managers from the following industries may be particularly well suited: Aerospace, Railway, Banking, Large Mobile Equipment, Energy Distribution, Shipyard, Power Generation.

Qualifications & Key Accountabilities include:

- An Engineering Degree or education and experience in an equivalent technical field is required (an Engineering Degree is not a strict requirement)
- Experience using enterprise-level project management and scheduling tools such as MS Project, Primavera P6, or JD Edwards (or like ERP systems) is required.
- PMP certification or an intention to pursue this designation, desirable
- Minimum 8 years experience in a design, manufacturing or a consulting Engineering environment, with minimum 3 years experience in project management role
- Experience managing customer expectations and requirements
- Demonstrated ability to manage mid to large-scale projects
- Demonstrated ability in product or system design and project planning/execution, including development of processes/procedures and process improvements
- Demonstrated experience in one or more of the following areas: Engineering design, team leadership, product design leadership, manufacturing team leadership, commercial operations, project coordination and/or project planning
- Procurement experience
- Financial management experience

Project Responsibilities: The Project Manager(s) will lead projects, which involve the design, development and manufacture of equipment and systems for the nuclear industry. The scope and responsibilities for Project Manager(s) can include:

- Take an active role in proposal development, review and presentation to the customer in partnership with the proposal Technical Lead and/or Functional Managers
- Coordinate and participate in the preparation of estimates, schedules and proposal inputs
- Carry out kickoff and routine project meetings with the project teams
- Monitor scope creep throughout the project life cycle

# POSITION PROFILE

- Working with the functional leads, develop overall project activities, tasks and resource needs, project management plans, risk registers and updates of dashboards to permit ongoing monitoring
- Develop relationship and work closely with sales and marketing team
- Ensure project management activities and tasks are consistent across all other projects and the completion of these on time and on budget
- Proactively identify project risk, analyse solutions, and take decisive action to resolve issues and communicate these to the business
- Present and report on project status/metrics, issues/solutions, risks and project resource needs
- Participate in coordinating / producing cost or schedule recovery / mitigation plans, and monitoring against these
- Participate in effective and efficient business process improvements
- Ensure compliance and adherence to processes and policy requirements
- Drive project processes including monitoring and controlling, and project closeout
- Act as the key interface with external customers for project communication / reporting and interact with subcontractors and cross-functional internal teams as necessary to execute projects
- Follow-up with customers to resolve past due and other commercial issues related to the project and/or contract.
- 

Key success factors are achieving and maintaining effective project planning, reporting management, milestone completion on-time/on-budget, meeting your metrics, motivating a diverse group of staff, and achieving results through influencing, actions and setting of expectations.

---

This is an opportunity to work for one of the world's largest and most successful organizations in a progressive, growth-oriented environment. Competitive compensation is on offer including salary, incentive bonus, group benefits and pension plan. Highly qualified candidates are invited to submit their resume information in complete confidence to:
